Dear Ilia,

Thank you for your email. We can make a D200 with external microphone (on a ca. 1 m cable). However, we are very busy with the regular production and other things, so there will be a considerable lead time for the customized D200. The price is SEK 4100 + shipping, excl. VAT.

The D500X external microphone actually has a 5-pole XLR connector, but it is wired differently than "regular" XLR. It also does not have phantom power (instead, one of the pins is reserved for 3.3 V power). Considering what I wrote above, it is difficult for us to find the time for such customization, but I will keep this in mind, should we find the time!

Best wishes,
Lars

Dear Lars,

Could you please produce a D200 Ultrasound Detector with external microphone. What will be the price and the delivery time?

Is it possible for you to produce External microphone for D500X but with XLR connector instead the DMX? I would like to connect it directly to my recorder for recording of the high frequency of ant signals. The ants of the subfamily Mirmicinae are producing the both - high- and low-frequency signals simultaneously and I think we will be able to record the both on different channels of the recorder.

Best wishes,

Ilia
